

An Industrial Visit to “Sista International”

7th February 2020

An **Industrial Visit to “Sista International”**, Khurja, Bone China Plant was organised on 7th February, 2020 by Centre for Skill Development (CSD) under the supervision of Dr. Kavita Arora, Convener of CSD. The visit comprises a batch of 60 students of various courses of college. The purpose of the industrial visit was to give exposure to students regarding the working of the crockery industry.

The beautiful journey began from the college campus in the morning. After reaching the venue the team was given some basic instructions by the officials of the Sista International. They provided a guide to give information about the functioning of the factory, i.e. the raw material used in producing the beautiful crockery, the waste management mechanism, the tools, and equipment used in shaping the crockery. The students were very thrilled to witness the process of clay turning into beautiful crockery which we use in daily life. The visit provided actual and first-hand knowledge about the Crockery industry and its growth prospects in market. The workers shared their work experience with the students. It also provided an exposure to the career opportunities in the Crockery Industry. Such visits give students a practical exposure about the theoretical knowledge gained in classrooms.
