**Title of the Event: Bird nest**

**In Collaboration with**

**Department of Environment, Government of India**

A bird nest is the spot in which a bird lays and incubates its eggs and raises its young. Nests provide safe places for eggs and young birds to develop. It also provides a warm place to parent birds to live and take care of their eggs, chicks, and it helps him to keep them safe from predators and it works as a hidden place to him. Nests also give protection to birds from different types of weather e.g. in rain, and from bad weather conditions. But factors like long electric cables in the balcony, replacement of ventilators with air conditioners in houses, radiation from mobile towers, pollution, use of insecticides and pesticides in farms and emission of harmful gases are considered the main reasons that led to a drastic decline in the population of birds especially the sparrows and their nests were replaced by the concrete jungles of the urban areas. So in order to raise the awareness of the falling population of birds. Our Eco-club volunteers (Under Swacchta Action Plan) made handmade bird nests and placed them at strategic positions to attract birds in the college campus (5-2-2021 to 20-2-2021) and also display them at various occasions like flower show in the campus in order to encourage and motivate the students about the serious issue which everyone should ponder on that. Total 30 students participated in this event.
