Department of Environment, Government of NCT, Delhi

Water conservation is the only answer to one of the world's most significant problems: water scarcity. SLC has already taken significant steps in setting up a rainwater harvesting system on campus as part of its commitment to zero water waste. Rainwater is directed from the gutters on the roof into the pipes that connect to the water tanks. The rainfall is then collected, replenished to the subsurface water table, and delivered via pipes to the water recharge pit constructed below the ground. Therefore, an orientation event was held on the college campus, to raise awareness among the students and almost 50 students participated on January 17th, 2023. Students were urged to organize in their local communities and near schools to raise awareness of water conservation.
