***Chrysanthemum* bloom in Campus**

The Botany Department, in collaboration with the Garden Committee, successfully cultivated a vibrant display of various Chrysanthemum varieties, including Snowball, Rosa, Quill, and Decorative, which bloomed in full splendour on the campus from 1st October to 27th December 2024. This achievement was made possible under the leadership of our visionary Principal Sir, Prof. Rabi Narayan Kar, whose guidance and support inspired the team to strive for excellence. This impressive display not only added a pop of colour to the campus but also provided a unique opportunity for students and faculty to observe and learn about the different Chrysanthemum varieties. The vibrant blooms also attracted a variety of pollinators, such as bees and butterflies, which added to the campus's biodiversity. The successful cultivation of these Chrysanthemum varieties was a testament to the hard work and dedication of the Botany Department and the Garden Committee. Their efforts demonstrated the importance of collaboration and teamwork in achieving a common goal. The Chrysanthemum display also served as a platform for outreach and education, with many students and visitors learning about the medicinal, cultural, and ecological significance of these flowers. Overall, the display was a resounding success, and we look forward to future collaborations between the Botany Department and the Garden Committee.
